

IMRAN MATANO NGATI - CV

Computer Science Graduate |  imranmat254@gmail.com |  0703733399
|  Kenya |  English / Swahili | github.com/imrany

PROFESSIONAL SUMMARY

Motivated Computer Science graduate (Rongo University, 2025) with hands-on experience in software development, web technologies, cloud platforms, and networking. Proven ability to build and manage server-side applications, databases, and APIs. Eager to grow in DevOps, cloud infrastructure, Data Entry and management, and AI-driven engineering with exposure to CI/CD pipelines, containerization, and monitoring tools.

EDUCATION

Bachelor of Science in Computer Science • 2021 – 2025

Rongo University, Kenya

Android Application Development Course • 2019 – 2020

Zalego Institution — Advanced Android app development (2 months intensive)

Kenya Certificate of Secondary Education (KCSE) • 2017 – 2020

Jomo Kenyatta Boys High School

TECHNICAL SKILLS

Cloud & DevOps

- Cloud platforms exposure: AWS, Google Cloud - provisioning and managing cloud resources
- Containerization with Docker
- CI/CD pipeline exposure using Github actions CI/CD for automated build and deployment workflows
- Linux environments: system administration, bash scripting, and command-line operations

Software Development (github.com/imrany)

- Back-end development with Go, Java, Rust, NodeJs (Javascript / Typescript) - REST APIs and server-side applications
- Desktop app and CLI tools development
- Database design and management: PostgreSQL, MySQL, MongoDB and OracleDB
- Payment gateway integration (M-Pesa Daraja API and other payment gateways)
- Android mobile application development (Kotlin)
- Website development and maintenance
- Version Control: Git

AI & Machine Learning

- Python programming for data science and ML workflows: NumPy, Pandas, Matplotlib, Scikit-learn
- Deep learning with PyTorch — building, training, and evaluating neural networks (CNNs, RNNs, feedforward models)
- Model development lifecycle: data preprocessing, feature engineering, training, validation, and inference
- Natural Language Processing (NLP): text classification, tokenization, and working with transformer-based models (e.g. BERT, GPT-style APIs)
- AI agents: designing and integrating LLM-powered agents using frameworks such as LangChain
- Familiarity with Hugging Face ecosystem for pre-trained models and fine-tuning
- Jupyter Notebooks for exploratory data analysis and model prototyping
- Basic MLOps concepts: model versioning, experiment tracking, and deploying models as REST APIs

Data Entry & Management

- Accurate entry, validation,
- Microsoft Office Suite: Word, Excel, PowerPoint

Other Tools

- Computer hardware repair, diagnostics, and maintenance
- Content writing and technical documentation
- Managing and configuring networks: Wi-Fi, routers, and company computer networks

WORK EXPERIENCE

Freelance Web & Software Developer • 2021 – 2022

- Developed and deployed web applications and websites for clients
- Built and maintained back-end APIs and server-side logic using Node.js and PHP
- Integrated M-Pesa payment systems into client business platforms
- Managed and optimized PostgreSQL and MongoDB databases for production use

Hackathon & Competition Participant • 2022 – 2023

- Participated in multiple national hackathons and computer science competitions
- Developed a Facility Aggregate System at the HealthIT Hackathon — a platform for aggregating health facility data to support decision-making
- Gained experience working under pressure in agile, team-based environments

NOTABLE PROJECTS

Facility Aggregate System — HealthIT Hackathon • 2022

A health data aggregation platform developed to centralize and process facility-level data for health management. Built with Node.js, RESTful APIs, and a relational database backend.

Company Network Configuration & Website Improvements • 2021 – 2022

Configured LAN/WAN networks and networking devices (routers, Wi-Fi) for business clients. Improved existing company websites for performance and usability.
